Code Test – Data Engineer

Given a dataset about ratings and movie information, from the dataset do:

1. Create a data model (conceptual data model is **mandatory**, logical, and physical data model is a **plus**).
2. Create a database based on the data model that has been created (No. 1) (using Oracle, SQL Server, PostgreSQL, or another database)
3. Create an ETL script to import the movies.csv dataset into the created database (No. 2) (using **python**, **Java**, **JS**, **SQL**, or **SSIS**)
4. Create a query to display (Using Stored Procedure or View is a **plus**)
    a. Number of unique film titles
    b. Film Title, Year of Release, and Rating of the film starring Lena Headey Sort By Year of Release.
    c. The name of the director and total gross of the films that have been directed.
    d. Film Title, Year of Release, and Rating of 5 films that have comedy genre with the largest gross
    e. Film Title, Year of Release and Rating of the film directed by Martin Scorsese and starring Robert De Niro

You are given time to work within **two days** from the email sent and confirmed by you with replying to the email. Send back the tasks using zip format or by using GitHub.
